

Iván Sánchez

Frontend Developer committed to crafting seamless and accessible digital solutions

About me

Frontend Developer with 2.5 years of experience, specialized in React Js and its ecosystem. During my time at **Ingeniería SCH**, I have demonstrated my ability to successfully contribute to the development of projects by applying my skills in real environments and tackling technical challenges with a proactive approach.

I am recognized for my ability to collaborate effectively in multidisciplinary teams and my commitment to deliver high quality solutions.

I am looking for new challenges that allow me to expand my skill set, both technical and interpersonal, and contribute to innovative projects that inspire continuous growth.

Experience

Frontend Developer • Ingeniería SCH SRL Nov 2022 – Aug 2024

- Built, styled, and delivered high-quality websites and digital experiences tailored to diverse client needs. Leveraged JavaScript, ReactJS, Redux, and Tailwind CSS to develop responsive, user-friendly, and high-performance applications that align with industry best practices.
- Played a key role in developing "**Oficina Virtual**", a scalable and secure platform used citywide for online municipal procedures. Collaborated closely with a cross-functional team to expand core functionalities, designing and implementing new user-facing features that improved accessibility and efficiency, positively impacting both user satisfaction and operational workflow.
- Led the frontend development for "**Mesa de Entrada**", an internal system overhaul project. In just two months, designed and launched an integrated solution that enabled operators to create records, perform data updates, and search through extensive databases. This solution not only replaced a command-based legacy system with a modern interface but also streamlined task execution and reduced operator processing time, marking a significant performance improvement.
- Contributed to both projects by developing reusable components, debugging technical issues, and integrating robust solutions, which led to optimized performance, improved user experience, and system scalability. Received consistent positive feedback from users and stakeholders, highlighting my commitment to detail and user-centered design.
- Spearheaded the design and development of "**IoT Platform**", a comprehensive web application that, although unreleased, provides a real-time control interface for managing city infrastructure via IoT technology. Through LoRa and Ultralight Controllers, the platform enables centralized management of city services like traffic lights, electric boards, street lighting, and water networks, showcasing advanced problem-solving skills and innovation in IoT integration for smart city projects.

Frontend Developer • Freelance July 2021 – Present

- Since 2021, I have been developing responsive landing pages with React, combining aesthetic design with an effective user experience.
- I've collaborated with multiple clients across diverse industries to deliver custom websites that not only highlight their products and services but also strategically align with their brand identity and business goals.
- My approach includes tailored SEO optimizations, cross-browser compatibility, and responsive design principles to ensure seamless performance across devices, enhancing both visibility and usability.
- Projects often include ongoing consultation and adjustments based on analytics and client feedback, allowing each site to evolve with market trends and customer needs.
